

CRICKSTATS

Phase 1: Brainstorming and Ideation

Team Lead: A.G. Vasheela Afrin

Team Members: R. Sivasakthi, S. Subha

Platform: Salesforce (Lightning Experience)

1. Project Overview

Project Title: Cricket Player Performance Tracking Application: CRICKSTATS

Platform: Salesforce (Lightning Experience)

2. User Story

As a Salesforce Admin, I want to create a comprehensive player performance tracking application within Salesforce to capture and analyze detailed match-by-match information of cricket players. The application will include custom objects such as Player and Match Performance with carefully defined fields and relationships to ensure data integrity and accessibility. By leveraging master-detail and lookup relationships, the application will enable robust tracking of individual and team performances, facilitate insightful reporting and analytics, and support the overall management of player statistics, thereby enhancing strategic decision-making and player development initiatives.

3. Problem Statement

Cricket teams keep player statistics in spreadsheets or on paper. Data is duplicated, totals are calculated by hand, and reports are slow and error-prone. Coaches cannot easily compare players or see trends across matches.

4. Who Is Affected

User	Need	Pain Point
Coach	Compare player form across matches	No single view of player history
Team Manager	Select the squad using facts	Manual calculation of totals
Player	See own progress	Statistics not shared or up to date
Salesforce Admin	Maintain clean data	Duplicate and inconsistent records

5. Ideas Brainstormed

Idea	Description	Decision
Spreadsheet template	Shared Excel sheet for all statistics	Rejected: no automation, error-prone
Custom Salesforce app	Objects, relationships, roll-ups and flows in a Lightning App	Selected
Third-party stats tool	Buy an external cricket statistics product	Rejected: cost, no customisation
Live score integration	Fetch scores from an API	Future scope

6. Proposed Solution

Build the CRICKSTATS Lightning App with a **Player** object and a **Match Performance** object. Match Performance is linked to Player through a Master-Detail relationship so that career totals (runs, wickets, matches) are calculated automatically with roll-up summary fields. Flows automate follow-up actions, and reports give coaches insight.

7. Expected Outcomes

- One central source of truth for player statistics
- Automatic career totals with no manual calculation
- Reports and dashboards for decision making
- Better data quality through relationships and validation

8. Skills Required

- Salesforce
- Flow Designer and process automation
- Data modelling
- Salesforce Lightning

9. Team

Name	Role
