4. Voice-over Script (short)

"Hello, we are Team CRICKSTATS. Our project is the Cricket Player Performance Tracking Application built on Salesforce. Its purpose is to track match-by-match player performance in one place. The benefits are accurate data, automatic totals and easy reporting. Now let us see how it works. We created Player and Match Performance objects, connected them with a Master-Detail relationship, added roll-up summary fields and a flow, and built the CRICKSTATS Lightning App. Let us add a player and a match performance and watch the totals update. This is the final output. Thank you for watching."

5. Recording and Upload Checklist
