

CRICKSTATS

Phase 7: Project Documentation

Team Lead: A.G. Vasheela Afrin

Team Members: R. Sivasakthi, S. Subha

Platform: Salesforce (Lightning Experience)

1. Abstract

CRICKSTATS is a Salesforce application that captures and analyses match-by-match performance of cricket players. It uses custom objects (Player and Match Performance), Master-Detail and Lookup relationships, roll-up summary fields, flows and reports to deliver accurate, automatic statistics in a single Lightning App.

2. Purpose of the Project

To replace scattered spreadsheets with one automated system that tracks player performance and supports strategic decisions and player development.

3. Use and Benefits

- Central and accurate player data
- Career totals calculated automatically
- Reports for coaches and managers
- Less manual work through automation
- Scalable: more players, matches and teams can be added

4. Architecture Summary

Player (parent) – Match Performance (child, Master-Detail). Player – Team (Lookup). Roll-up summary fields on Player. A Record-Triggered Flow on Match Performance. Lightning App CRICKSTATS with tabs and reports.

5. User Guide

Task	How
Add a player	Open CRICKSTATS, Players tab, New, fill details, Save
Record a match	Open the player, Match Performances related list, New, enter match details
View career totals	Open the player record; totals are on the record page
View reports	Reports tab, open Player Statistics

6. Limitations

- Data is entered manually
- No live match feed
- Developer Edition limits apply

7. Future Scope

- Dashboards

- Experience Cloud portal for players and fans
- Live score integration
- AI-based performance prediction

8. Conclusion

CRICKSTATS demonstrates how declarative Salesforce tools can build a complete, automated performance tracking solution without code.
