

CRICKSTATS

Project Video Plan and Narration Script

Team Lead: A.G. Vasheela Afrin

Team Members: R. Sivasakthi, S. Subha

Platform: Salesforce (Lightning Experience)

1. Video Overview

Item	Details
Title	CRICKSTATS: Cricket Player Performance Tracking Application
Length	About 7 minutes
Format	MP4, 1920x1080 (or 1280x720), 30 fps
Style	Screen recording of the Salesforce org with voice-over, plus title and closing slides
Upload	YouTube (unlisted) or Google Drive

2. Scene-by-Scene Plan and Narration

0:00 – 0:30: Introduction

Speaker: Vasheela **On screen:** Title slide

"Hello everyone, we are Team CRICKSTATS. Our project is the Cricket Player Performance Tracking Application, built on Salesforce. I am A.G. Vasheela Afrin, team lead, along with my team members R. Sivasakthi and S. Subha."

0:30 – 1:15: Problem and Objectives

Speaker: Vasheela **On screen:** Problem and objectives slides

"Cricket statistics are usually kept in scattered spreadsheets, which causes errors and delays. CRICKSTATS stores everything in one place and calculates player totals automatically."

1:15 – 1:45: Developer Account Creation

Speaker: Sivasakthi **On screen:** Salesforce login page, Setup home

"First, we created a free Salesforce Developer Edition account, verified our email and logged in to Setup."

1:45 – 2:45: Object Creation

Speaker: Sivasakthi **On screen:** Object Manager with Player, Match, Performance

"Next, we created three custom objects: Player, Match and Performance. Player stores player details, Match stores match details, and Performance stores each player's result in a match."

2:45 – 3:15: Tabs and Lightning App

Speaker: Sivasakthi **On screen:** Tabs setup, App Manager, app opening

"We created a tab for each object and then built the CRICKSTATS Lightning App, adding all three tabs so users can navigate easily."

3:15 – 4:15: Fields and Relationships

Speaker: Subha **On screen:** Field list, relationship setup

"We added fields such as runs scored, balls faced, wickets and overs bowled. Performance has a Master-Detail relationship with Player and a Lookup to Match."

4:15 – 5:00: Roll-up Summary

Speaker: Subha **On screen:** Creating the roll-up field, totals updating

"Because of the Master-Detail relationship, we created roll-up summary fields on Player: Total Runs, Total Wickets and Matches Played. Watch how the totals update when a new performance record is added."

5:00 – 5:45: Flows

Speaker: Subha **On screen:** Flow canvas, live trigger

"Finally, we built a flow that runs automatically when a performance record is created, saving manual work."

5:45 – 6:30: Live Demo

Speaker: Vasheela **On screen:** Full app walkthrough

"Now a quick demo. We add a new player, record two match performances, and you can see the totals calculated automatically."

6:30 – 7:00: Conclusion

Speaker: Vasheela **On screen:** Closing slide

"CRICKSTATS shows how Salesforce's no-code tools can track player performance. In future we plan to add dashboards and a fan portal. Thank you for watching."

3. Recording Checklist

- Use OBS Studio, Clipchamp or Xbox Game Bar (Windows) for screen recording.
- Record at 1080p; zoom the browser to 110-125%.
- Close extra tabs and notifications; use a quiet room.
- Log in to the org before starting and keep sample data ready.
- Speak slowly; each member records their own section.
- Export as MP4 (H.264) and check the audio before uploading.
